

Ancestral French Soaps

Organic Olive Oil Hair Soap

1 bar = 2.5 bottles

Inspired by our ancestors, we have revived a 16th century, Mediterranean recipe with pure and simple environmentally sustainable ingredients. Back then, there weren't liquid soaps and **Environment:** The Hair Soap base is 100% organic, first cold press olive oil. Olive trees live for hundreds of years and become staples of their eco-system. Using olive oil helps preserve existing agriculture and creates concentrated hair bars that need minimal packaging.

Health: The sebum is a natural protective oil on our skin that locks in moisture and coats each strand of our hair. Palm, coconut and petroleum based soaps strip it off and leaves scalp and strands dry.

But the oil from olives makes soap rich in nutrients that respects the biology of our scalp and skin. Many find that as their body adjusts to the Hair Soap they no longer need conditioner.

Directions:

Take the soap in your hand and rub 10 times directly on your soaking wet hair, massage into scalp. Rub extra as needed. Then rinse out well.

P.S. soap residue will biodegrade within 3 days in the water system!

Keep in Mind:

Liquid shampoo is over 75% water and often have lather additives to make extra bubbles. Bar soaps is concentrated, so a little goes a long way. Also less lather will still do a fabulous job of cleaning your hair.
