

Dish Soap

The **Soaptivist, a soap on a mission**, is the most basic soap we make. It's 100% organic olive oil, filtered water, and nothing else. We believe that if you change your home cleaning habits to include bar soap, you have shifted your mindset around sustainability. This is health and environmental activism through the choice to clean with a non-toxic, plastic free, minimally packaged bar soap!

How to use:

Dishes: Rub sponge or cloth directly on the Soaptivist bar, scrub dishes and rinse.

Surfaces: Rub the Soaptivist directly onto the wet surface, scrub with sponge or cloth. Rinse surface with clean, wet sponge or cloth. Dry as needed with clean, dry cloth.

Tip: keep the soap as dry as possible between uses to make it last even longer. Consider switching out bars whenever one becomes too soft from constant moisture. Alternatively, place the soap on top of a dry washcloth or sponge after using it to simultaneously dry out the soap and get the cloth ready for your next use. If the soap still gets soft, don't worry, just get a non-perforated soap dish, and pat yourself on the back, you've just made liquid soap!

Tip: to make your dish soap last even longer try cutting it into a few large pieces (in half or quarters) that way you can use one while the others keep drying and they won't get wet or soften.
